

# *WhisperWalls™*

*by Whisper Walls®*

## **The Original is Still the Best...**

WhisperWalls™ are exceptionally designer friendly site-built upholstered walls that perform as acoustical, tackable or decorative surfaces. WhisperWalls™ installations are characterized by distinctive design elements and a tailored finish which make them the choice of top design professionals throughout the world. Our comprehensive wall systems allow the designer to create free form curves, integrated decorative reveals or three dimensional surfaces without compromise to fit or finish. Acoustical, reflective, diffusive or tackable properties can be simple or complex as needed; the performance has no effect on the final appearance.

*No Limits... Set Your Imagination Free.*

## Elegance and Acoustical Functionality...

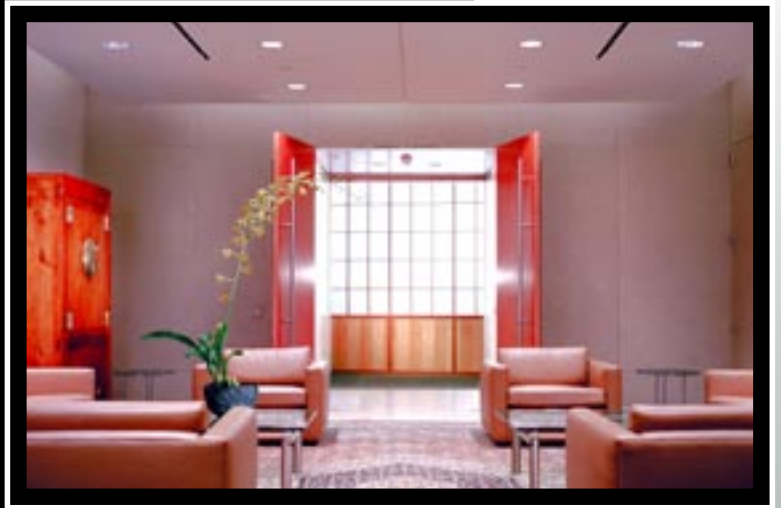

The WhisperWalls™ system is exceptionally well suited for use in all commercial and residential settings. Tailored fabric walls add warmth and elegance to any space and the reduction of unwanted noise creates a physical calm. These attributes are combined in the WhisperWalls™ system to create an exceptional interior environment.

## More Options Create Better Designs...

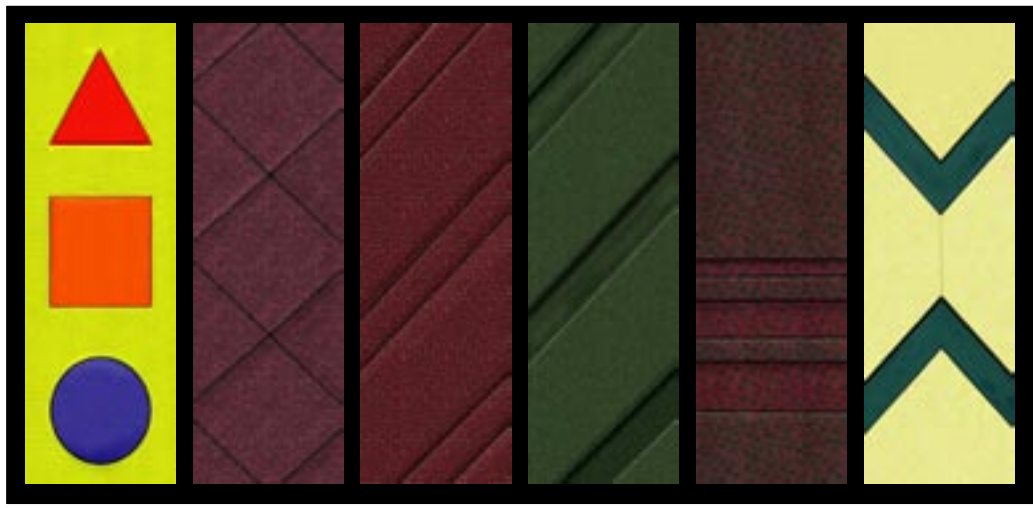

Mix and match from the industry's largest selection of fabric stretching system profiles which include multiple edge conditions and integrated reveals. Customize acoustical performance with standard 1/2", 1", 1-1/2" and 2" system thicknesses. Designing with Whisper Walls is a delight because our profiles are engineered to work together so no matter how intricate the design becomes it will turn out perfect every time.

## Site Fabricated to Exact Specifications...

Whisper Walls is site fabricated to ensure a tailored appearance and superior performance. Every Whisper Walls project is completed by the industry's largest worldwide network of factory licensed and trained Installation Companies.

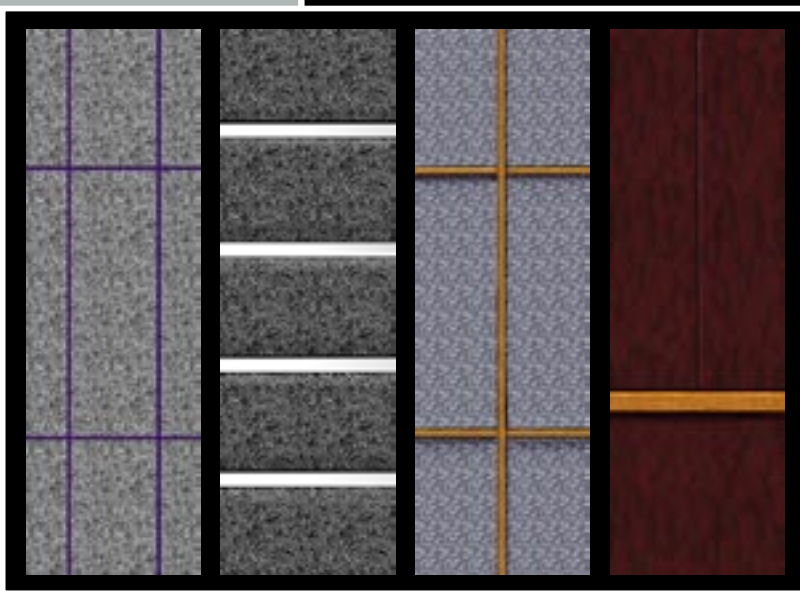

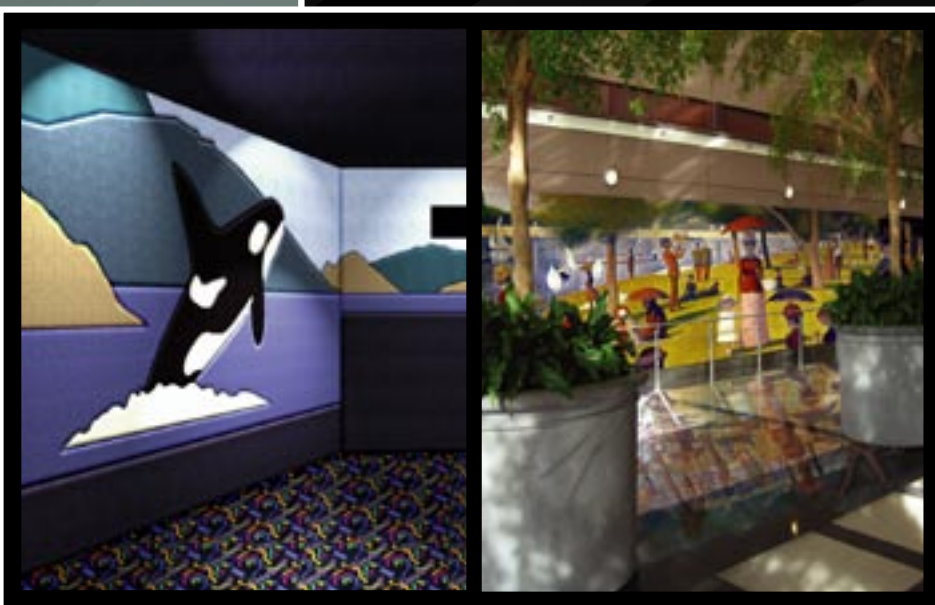

## Dimensional...

Add further design interest with 2D and 3D design elements. Custom curves, shapes and depths are created with a single stretching system member so seams come out perfectly matched every time. Add multiple colors to further enhance the design.

## Reveals and Rails...

Add interest, beauty and texture by selecting from our family of integrated reveal and rail systems. Our reveals come in a wide variety of widths and finishes such as woods, metals, laminates or paint to coordinated with the overall design scheme. Low voltage lighting can also be added as a decorative or functional element. Our rail systems also include chalk rails and decorative chair rails.

## Formable and Artwork...

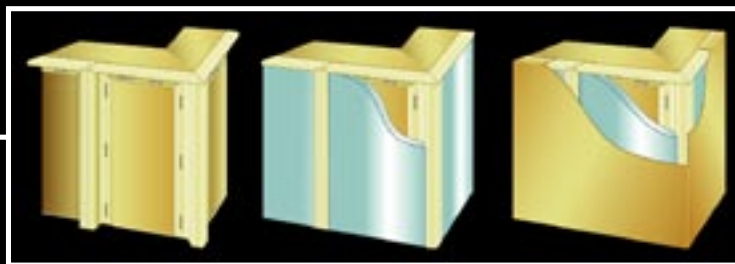

Our formable stretching systems can be contoured and formed to suite any design intent. Our high resolution imaging process can recreate virtually any image at any size. Fine art, photography, digital images and much more become integral elements of the overall design without compromise to system performance.
