

WhisperSpan[™]

by Whisper Walls[™]

Creative Acoustical Ceilings...

The WhisperSpan wide-span, fabric covered acoustical ceiling system resembles a lightly textured hard surface but it performs acoustically. Until now, the high cost of attractive acoustical ceilings limited most designs to an unsightly grid of acoustical tiles. Now, WhisperSpan offers the design professional an attractive and economical option with unparalleled design and performance flexibility. The unique 16' wide WhisperSpan textile can be installed on flat, angular, curved, barrel vaulted or domed ceilings as a monolithic panel up to 60' long. This system is site-built which allows each panel to precisely conform to field conditions encountered. Choose WhisperSpan for its beautiful tailored appearance, high performance acoustics and long term maintainability.

No Limits... Set Your Imagination Free.

Endless Possibilities...

WhisperSpan is so much more than simply a ceiling system. It is a designers tool that gives the creative professional an endless range of design options and possibilities. WhisperSpan provides the architect and designer with a means to accomplish their visual and performance objectives in a cost effective fashion. WhisperSpan interiors are light, clean and free from busy grid lines.

Greater Visual Impact...

WhisperSpan is used in a wide range of occupancies from concert halls to restaurants, from auditoriums to corporate interiors. It can either blend into the background or dramatically accent a space. Choose from three standard colors, Natural, Vienna Creme and Black or for greater visual impact print a large scale photograph, fine art or graphic image using our specialized high resolution image technology.
